Scientific and technical conference with international participation

SFERA 2015: DESIGN AND TECHNOLOGIES OF ARCHITECTURAL OPENINGS

Agency for marketing and publishing SFERA, Mostar

University of Banja Luka, Faculty of Architecture, Civil Engineering and Geodesy

CALL FOR ABSTRACT

for the scientific and technical conference with international participation

SFERA 2015

DESIGN AND TECHNOLOGIES OF ARCHITECTURAL OPENINGS

Submission deadline **24th July 2015**

ABOUT THE CONFERENCE

The conference deals with the basic elements of built space - architectural openings. These elements of the spatial configurations that we use almost without thinking about them, as a language, determine our vision and movement through space, and affect our experience and sense of safety and comfort. The conference rethinks the scientific and technological achievements and professional commitment in the context of the production, use and design of architectural or building openings. The objective of the discussion that connects the past overview, present achievements and future visions about the architectural elements is the exchange of knowledge and experience in various fields of engineering, as well as opening the possibility of establishing international and domestic cooperation.

The conference consists of two parts - the presentation of scientific and technical papers in the first part, and presentations of new technologies and products in the field of manufacturing and design of windows and doors, in the second part of the conference. The companies engaged in the production and distribution of these architectural elements are welcome to apply for the presentation at the conference, including an exhibition of catalogs and other promotional materials in the exhibition area of the conference.

TOPISC

- [1] Architecture and design of openings
- [2] Technological aspects and quality performance of doors and windows
- [3] Structural quality of building and architectural openings
- [6] Building regulations and classification of opening technologies
- [4] Architectural openings concerning functionality and safety of buildings
- [4] Architectural openings and energy efficiency
- [5] Health, building comfort and architectural openings
- [8] Historical development and symbolic meaning of architectural openings
- [9] Architectural openings and quality of urban space
